

5. Advanced Layout

Left Column: Key Features

- Manual positioning for precise control.
- Multi-column text flow.
- Custom colors for emphasis.
- Combination of different elements.

This approach is ideal for newsletters, brochures, or complex reports where a standard linear layout is insufficient. It requires managing the X and Y cursor positions manually.

Info: This is a colored box used to highlight important information.

Right Column: Analysis

The right column provides supplementary information. By controlling the cursor with `set_x()` and `set_y()`, we can create sophisticated, magazine-like layouts. This avoids the limitations of a single, continuous text flow.
